Acknowledgement

This project consumed huge amount of work and dedication. Still, implementation would not have been possible if we did not have a support of many individuals. Therefore we would like to extend our sincere gratitude to all of them.

First of all we are thankful to Mr. Dinh Vu Quoc Trung for providing necessary guidance concerning projects implementation as well as her provision of expertise. Without her superior knowledge and experience, the Project could not have been successful. We also would like to express our sincere thanks towards the members of the team who devoted their time and knowledge in the implementation of this project.

Finally, we express our gratitude toward our families and colleagues for their kind co-operation and encouragement which help us in completion of this project.

Synopsis

Our client is an institute by the name "Institute of Fine Arts", which has been started by the two well-trained professionals who are one of the standard people in the field of animation and fine arts. The procedures that they follow are they first conduct classes on paintings, animation, etc.

We offer users a clean and visual interface which help enhance user experiences and save time when they need to find information among the competitions of fine art in the University

In this website they want to implement these competitions, where in they can announce the competitions, provide a facility for the students to upload and download the image files. Also the student can update or remove the pictures of the same. Thus through this website they can automate the process, and as well reduce the time consumption in evaluating and fetching the records of the students, designs, etc. So they had approached you to help them by building a website by building the following functionalities, in it.

PROBLEM STATEMENT

After several enthusiastic discussions, our team have put ourself into student, staff, and manament's position to find out problems and solutions in order to decrease time for making decision of customer base on detail information and showcase of products. We have to consider a series of question:

1. What is the most important thing that institute and ... need?
2. How can we arrange information on a page?
3. How can the users interact with page?
4. How to hold the details of student, staff, competitions, awards, postings, exhibition details, details of the awards issued, postings send to the exhibition along with the status, etc .
- 5.

The website is to be developed for the Windows Platform using HTML5, JavaScript and Geolocation. The site should work well in all leading browsers including Chrome, IE, Firefox etc.

Analysis

- User: public visitors, students, staffs (manager, administrator and the staff (lecturers) of the institute)
- Hold the details of student, staff, competitions, awards, postings, exhibition details, details of the awards issued, postings send to the exhibition along with the status, etc .
- Design an interface, through which the following are to be implemented such as Students can upload or edit or delete and search and retrieve the paintings that are posted based on the eligibility, Staffs can view the postings posted along with the details, and mark it as the best or better, etc. and provide the remarks.
 - The reports are generated like the submissions received over a particular period for a particular competition that are best, etc.

CUSTOMER'S REQUIREMENTS SPECIFICATIONS

Company: Institute of Fine Arts

Website types: Education and E-commerce Websites

Website's specific functionalities:

- Introduce the information and activities of institute.
- Manage details of staff and students
- Organize online paintings competitions and exhibitions for auction

User Interfaces

- The user interface for the website shall be compatible to any browser such as Internet Explorer, Mozilla, Google Chrome by which user can access to the system.

Hardware

- A minimum computer system that will help you access all the tools in the courses is a Intel core i3 or better
- 2 gigabytes of RAM or better

Software

- Notepad/HTML editor
- Dreamweaver
- IE v11, Google Chrome v61, Firefox v56
- Visual Studio 2017
- Microsoft MySQL Server Management Studio 17

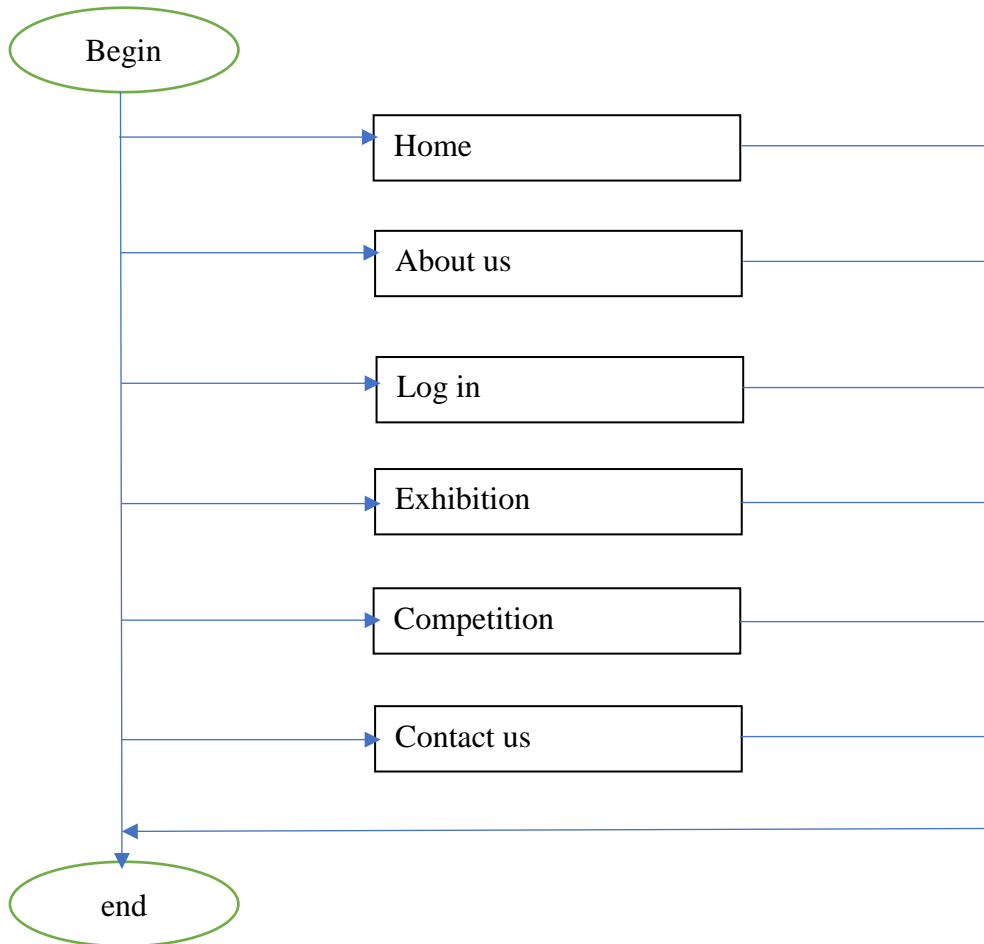

Scope of the work (in brief):

After having time working together, we come into decision which need to be build:

1. Each entity is managed by website through six basic functions: view, insert, update, delete, search and report.
2. Each user has different role on accessing and managing data.

3. Homepage will show menu options for Home, Log in, About us, Exhibitions, Competitions, Contact us.

Diagram of the website: Home, categories
